Lab 9: Malware Analysis

CS 460 Spring 2015: Security Lab

Due 11:59 PM Thursday 04/09/15

Overview:

Due to the sensitive nature of malware, this week you are assigned readings out of a book called
"Practical Malware Analysis." You can access the textbook online here. It is an excellent book,
and will teach you not only malware analysis skills, but also related topics such as exploitation.
Your task is to read chapters 15, 16, and 18, and answer problems 15-1, 16-1, and 18-1. The
necessary lab samples are in your svn repository. Should you find the labs interesting and want
to learn more, you can get ALL of the labs here. You should hand-in a **pdf** writeup with your
answers to the assigned problems in your svn. This lab will be graded manually and you will find
your grades in compass.
